

October 5, 2006

Mr Angelo Fenno was recently hospitalized for cholecystitis by Dr Danielson. After discharge he was admitted with severe pancreatitis. This was complicated by pancreatic failure including new onset diabetes. He had a prolonged hospital course and was discharged with home Nursing twice weekly. He requires daily insulin injections, blood sugar Monitoring at home and dietary treatment. He is also on multiple Medications. It is clearly in his best interest to live with his son, Especially with dealing with the diabetes, since diabetes is a complicated Medical problem. It is clearly safer for Mr Fenno to live with his son.

Sincerely,

Lawrence J Moschitto MD
